

TH-416 Bactericide for RO Membrane

Properties:

TH-416 is an oxidative bactericide for RO membrane. It has strong sterilization effect, and can be used in place where bacteria breed well and COD is much high. TH-416 can be used for all membranes and their component parts, has the properties of good bactericide, fast effective, convenience in use and low cost.

(1)Specialized for RO membrane, liquid, simple for use;

(2)High effective to control bacteria gross and COD

(3)Compatible with all RO, hollow fiber, NF and UF membrane;

(4)Nontoxic, good bio-degradation, no pollution.

(5)Oxidative chemicals, for some membrane component parts with non-resistance to oxidation, the dosage should be controlled carefully, and even reductive agent should be required to protect the membrane.

Package and Storage:

25kg plastic barrel, storage for six months.

Safety and Protection

A little stimulation, avoid to contact with skin and eye, when contacted, flush with water.
